

HOW THE CC BY LICENSE FOR PREPRINTS IMPACTS JOURNAL PUBLICATION

A Guide for Researchers

If I publish a preprint and license it with CC BY, can I also publish my research in a journal?

Yes! Here is what you need to know:

- ▶ **If a preprint is licensed CC BY, any material from the preprint that also appears in another version, including in a journal, will carry the same CC BY license.**
 - Additions or changes in the journal version or version of record can also be licensed CC BY or can be given a different license.
 - You are not required to mention the CC license when submitting to a journal.
 - Anyone who accesses the preprint may reuse it under the terms of the CC license.
- ▶ **All open access journals and almost all subscription journals accept submissions of research that have also been published as a preprint and consider the preprint to be a separate work.** You should be aware of the policies of your target journals before licensing your preprint.
- ▶ **Researchers can use the [open policy finder](#) (formerly Sherpa Romeo) to confirm journal policies.** [ASAPbio](#) also recommends [this crowdsourced table](#) listing preprint policies by publisher.

------------	---	---	---	--------

- ▶ If you want to make changes to your published preprint, you can **version the preprint** directly on the preprint server to reflect these updates.
- ▶ **Some open science funders require CC BY-licensed preprints**, including the [Gates Foundation](#) and [ASAP \(Aligning Science Across Parkinsons\)](#), while many others, including [Wellcome Trust](#) and [HHMI](#), encourage and support openly licensed preprints.
- ▶ **CC BY is increasingly the required license for open science funders and open research publishing platforms**, including [F1000Research](#), [Gates Open Research](#), and [Wellcome Open Research](#).
- ▶ With some funders, like Wellcome Trust, using a CC BY license on your preprint helps you comply with funder open access requirements when you can't openly license your author-accepted manuscript or version of record.
